Analysing repeated measures with Linear Mixed Models

Unlike other designs, the repeated measures design has two experimental units: between and within. In this example, the first (between) experimental unit is a subject.

Repeated Measures Analysis - NCSS

Multi-level modelling is another possible approach to analysing repeated measures data. This cannot be done in all statistical packages – possibilities include S-Plus and a free package called R. Alternatively, there is a specialist multi-level modelling package called MLWin.

What makes the repeated measures data analysis distinctive is the covariance structure of the observed data|those data from the same subject may be correlated and the correlation should be modeled if it exists.

Analysing repeated measures with Linear Mixed Models

In many repeated measures situations, the marginal model fits the data better than a Mixed Model. It has many of the same advantages as Mixed Models, and is in many ways more intuitive. It's a nice bridge because conceptually, it's very similar to the Repeated Measures ANOVA you're used to.

Analyzing Repeated Measures Data: ANOVA and Mixed Model

Mixed Models – Repeated Measures Introduction This specialized Mixed Models procedure analyzes results from repeated measures designs in which the outcome (response) is continuous and measured at fixed time points. The procedure uses the standard mixed model calculation engine to perform all calculations.

Repeated Measures ANOVA Issues with Repeated Measures Designs Repeated measures is a term used when the same entities take part in all conditions of an experiment.

Repeated-Measures ANOVA in SPSS Correct data formatting for a repeated-measures ANOVA in SPSS involves having a single line of data for each participant, with the repeated measures entered as separate

variables on that same line (in this example, they are called "trial1," "trial2," "trial3," and "trial4").
