Indeed, the reason for the importance of the numerical methods that are the main subject of this chapter is precisely that most equations that arise in real" problems are quite intractable by analytical means, so the computer is the only hope.

The methods that we will describe, all belong to the category of iterative methods. Such methods will typically start with an initial guess of the root (or of the neighborhood of the root) and will gradually attempt to approach the root.

some analytical methods like Picard or Taylor expansion are useful for numerical solutions of equations/problems, but they are useful for proof of Theorems (e.g. existence of solution for $y' = f(x) \dots$

faster than numerical methods; however, the speed of analytic mode matching schemes depends almost entirely on the time taken to find the roots of the governing eigenequation, and it is not necessarily the case that this is faster than equivalent numerical methods.

problems for which analytical solutions are known, one must resort to numerical methods. In this situation it turns out that the numerical methods for each type of problem, IVP or BVP, are quite different and require separate treatment. In this chapter we discuss IVPs, leaving BVPs to Chapters 2 and 3.

Numerical analysis has a rich store of methods to find the answer by purely arithmetical operations. So, Numerical analysis can solve problems where analytical solutions are not available (using mathematical approach) or very hard mathematical process. Numerical methods are capable of handling large systems of equations, different degrees of ...

Different methods have been presented to achieve this goal, this paper investigates difference equation, non-dimensional, Broms, Poulos, and the direct methods, and by solving a problem using these methods, as well as using numerical analysis, the results will be compared.

The numerical investigation is focused on modal analysis of straight beams with and without consideration of warping of doubly symmetric open and closed cross-sections.
