The fundamental concept underlying the geometry of curves is the arclength of a parametrized curve. Definition. If  $\gamma: [a, b] \rightarrow \mathbb{R}^3$  is a parametrized curve, then for any  $a \leq t < b$ , we define its arclength from  $t$  to  $t_0$  to be  $s(t) = \int_t^{t_0} \|\dot{\gamma}(u)\| du$ . That is, the distance a particle travels—the arclength of its trajectory—is the integral of its speed.

Elementary Differential Geometry: Curves and Surfaces Edition 2008 Martin Raussen ... This is why we start with a brief chapter assembling prerequisites from linear geometry and algebra. Most or all of these will be known to the reader from elementary courses and textbooks. We focus on geometric aspects of methods borrowed from linear algebra.

This course is an introduction to differential geometry. The course itself is mathematically rigorous, but still emphasizes concrete aspects of geometry, centered on the notion of curvature.

ELEMENTARY DIFFERENTIAL GEOMETRY §1-§3. When a Euclidean space is stripped of its vector space structure and only its differentiable structure retained, there are many ways of piecing together domains of it in a smooth manner, thereby obtaining a so-called differentiable manifold.

Differential geometry is a mathematical discipline that uses the techniques of differential calculus, integral calculus, linear algebra and multilinear algebra to study problems in geometry. The theory of plane and space curves and surfaces in the three-dimensional Euclidean space formed the basis for development of differential geometry during the 18th century and the 19th century.

Chapter 1 Introduction 1.1 Some history In the words of S.S. Chern, "the fundamental objects of study in differential geometry are manifolds." 1 Roughly, an  $n$ -dimensional manifold is a mathematical object that "locally" looks like  $\mathbb{R}^n$ . The theory of manifolds has a long and complicated
