

molecular geometry lab with pdf

Molecular Geometry Lab In this lab you will write out Lewis structures for a number of molecules. You will classify these structures as to VSEPR type. You will then construct ball and stick models, sketch the models and show the direction of polarity, if any. A molecule has

Chemical Bonding II: Molecular Geometry and Hybridization

tetrahedral electron (pair) geometry. The molecular geometry is based on the locations of the atoms around the atom of interest. A water molecule has a bent molecular geometry. A molecule is polar if the molecule has a center of positive charge and a center of negative charge which do not coincide or cancel.
